Project Name	Import Data Using Transform Map
Maximum Marks	2 Marks

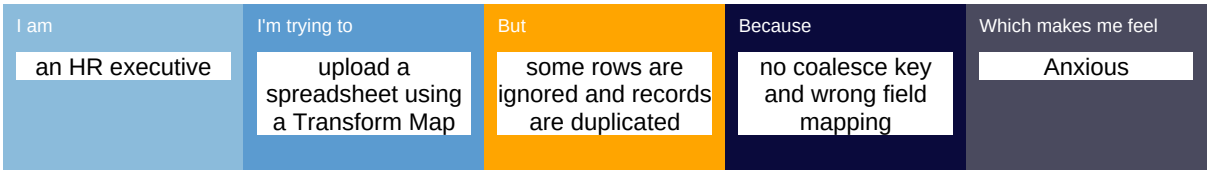
Customer Problem Statement Template:

Create a problem statement to understand the point of view of people who move spreadsheet data into ServiceNow. The Customer Problem Statement template helps you focus on what matters to create a data import experience that is simple, safe and dependable.

A well-articulated problem statement allows you and your team to find the ideal solution for the challenges users face when they bring bulk data into ServiceNow through an Import Set and Transform Map. Throughout the process, you'll also be able to empathize with developers and HR or business users, which helps you better understand how they experience field mapping, duplicate records and failed rows.

I am	*Describe customer with 3-4 key characteristics - who are they?*	A ServiceNow developer or HR executive who works with large employee and asset data sheets and needs that data inside ServiceNow
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	Bring bulk data from spreadsheets into the right ServiceNow table using an Import Set and Transform Map without manual entry
but	*Describe what problems or barriers stand in the way - what bothers them most?*	The transform runs with errors, some rows get ignored and existing records get overwritten or duplicated
because	*Enter the "root cause" of why the problem or barrier exists - what needs to be solved?*	Source columns are mapped to the wrong target fields, no unique key (coalesce) is chosen and data such as dates and references is not converted properly
which makes me feel	*Describe the emotions from the customer's point of view - how does it impact them emotionally?*	Confused, anxious about losing correct data and frustrated at repeating the same work

Example:



Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow developer who prepares data migration for a new instance	Migrate legacy user and department data into ServiceNow tables using a Transform Map	Reference fields such as department stay empty and some users are created twice	The reference values in the file do not match the records in the target table and coalesce is not configured on a unique field	Worried and under pressure to fix the data before go-live
PS-2	An HR executive who updates employee details every month through a spreadsheet	Update existing employee records in bulk instead of editing each record one by one	New duplicate records are created instead of updating existing ones, and date fields show wrong values	The choice action and coalesce field are not set properly and the date format in the file differs from the ServiceNow format	Annoyed and tired of correcting the same mistakes every month
