Project Design Phase-II
Data Flow Diagram & User Stories

Date	28 September 2026
Team ID	SWTID-2026-2169
Project Name	Import Data Using Transform Map
Maximum Marks	4 Marks

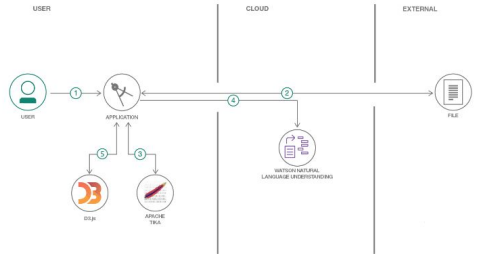

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within the Import Data Using Transform Map process in Service Now. A neat and clear DFD depicts the right amount of the system requirement graphically. It shows how data enters the system from external sources such as Excel or CSV files, how it is loaded into the Import Set staging table, how the Transform Map changes the data by mapping source fields to target table fields, and where the final data is stored in the target table (e.g., Incident, User, or Group). It also shows how errors and skipped records are logged in the Transform History for review.

Example: [(Simplified)]

Flow

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
Admin	Import Data	USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
Admin	Transform Map	USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2
Admin	Transform Map	USN-4	As a user, I can register for the application through Gmail	I can upload the file and see the records in the import set table	Medium	Sprint-1
Admin (Data Uploader)	Login	USN-5	As a user, I can log into the application by entering email & password	I can access the instance with valid credentials	High	Sprint-1
Admin (Data Uploader)	Dashboard	USN-2	As an admin, I can view the Import Sets and Transform History on the dashboard	I can see the import status (Loaded,	Medium	

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
				Processed, Error)		Sprint-1
Customer (Web user)	Data Source	USN-3	As an admin, I can create a Data Source and upload an Excel/CSV file	The file is attached and the data source is saved successfully	High	Sprint-1
Customer Care Executive	Import Set	USN-4	As an admin, I can load the file data into the Import Set (staging) table	The records appear in the staging table	High	Sprint-1
Data Analyst (Import Operator)	Transform Map	SN-5	As an analyst, I can create a Transform Map and map source fields to target table fields	The field mappings are saved and shown clearly	High	Sprint-2
Data Analyst (Import Operator)	Coalesce	USN-6	As an analyst, I can set coalesce fields to avoid duplicate records	Existing records are updated and no duplicates are created	Medium	Sprint-2
Data Analyst (Import Operator)	Run Transform	USN-7	As an analyst, I can run the transform to load the data into the target table (e.g., Incident, User)	The data is inserted or updated in the target table	High	Sprint-2

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Administrator (System Admin)	Access Control	USN-8	As an administrator, I can assign roles and ACLs so only authorized users can run imports	Unauthorized users cannot access import features	High	Sprint-3
