Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	29 September 2026
Team ID	SWTID-2026-2169
Project Name	Import Data Using Transform Map
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIN
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Data Transformation	Run Transform to load data into target table Validate and clean data using onBefore / onAfter scripts
FR-4	Import Validation & Logging	View import log and transform history Check inserted, updated and skipped / error records
FR-5	Data Access & Reporting	View import log and transform history Check inserted, updated and skipped / error records

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	The import process is simple and easy to follow. An admin can upload an Excel/CSV file, create a Data Source and run the Transform Map using the Service Now UI, with clear field mapping and no complex coding required.
NFR-2	**Security**	Only authorized users (admin / import_admin roles) can upload files and run transforms. ACLs protect the import set and target table data from unauthorized access or modification.
NFR-3	**Reliability**	Coalesce fields prevent duplicate records, and on Before / on After scripts validate data so only correct records are loaded. Import logs and transform history help track errors and re-run failed imports safely.
NFR-4	**Performance**	Staging in the Import Set table allows large volumes of data to be loaded and transformed quickly. Optimized field mapping and indexing keep the import time low, even for bulk data.
NFR-5	**Availability**	The application runs on the Service Now cloud platform, so it is available 24/7 through web and mobile access, with minimal downtime and easy recovery.
