Project Development Phase

Model Performance Test

Date	29 September2026
Team ID	SWTID-2026-2169
Project Name	Import Data using Transform Map
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Model Summary	Salesforce automation setup for Data management using Object, Fields and Reports. **Note :** Import Records if data Match Correctly then Records will Created or Else it will Show Error	[Insert screenshot]
2.	Accuracy	Training Accuracy - 98% Validation Accuracy - 98%	[Insert screenshot]
3.	Confidence Score (Only Yolo Projects)	Class Detected - If detecting Object and fields name if wrong and other activity Confidence Score - If the model is 92% sure the object is correctly detected	[Insert screenshot]

Model Performance Test

Date	29 September 2026
Team ID	SWTID-2026-2169
Project Name	Import Data using Transform Map
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

Project Development Phase

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Source data imported into Power BI Desktop using Get Data (Excel/CSV). Tables loaded and previewed in the Power Query Editor. [Insert screenshot of imported data]
2.	Data Preprocessing	Using Transform Data (Power Query): removed null values and duplicates, corrected data types, renamed columns, and applied the transform map to shape the data. [Insert screenshot of Power Query Editor]
3.	Utilization of Data Filters	Slicers, visual-level, page-level and report-level filters applied to explore data by category, date and region. [Insert screenshot of filters/slicers]
4.	DAX Queries Used	Example measures: Total Value = SUM(Table[Value]) Average Value = AVERAGE(Table[Value]) Record Count = COUNTROWS(Table) [Insert screenshot of DAX measures]
5.	Dashboard design	No of Visualizations / Graphs - [ ] [Insert screenshot of dashboard]
6.	Report Design	No of Visualizations / Graphs - [ ] [Insert screenshot of report]

Performance Test

Date	29 September 2026
Team ID	SWTID-2026-2169
Project Name	Import Data using Transform Map
Maximum Marks	

Project Development Phase

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Source data connected to Tableau using Connect > Excel/Text file. Data loaded and previewed in the Data Source tab. [Insert screenshot of connected data]
2.	Data Preprocessing	Data cleaned and prepared in Tableau: handled null values, corrected data types, renamed fields, and applied the transform map to shape the data. [Insert screenshot of data preparation]
3.	Utilization of Filters	Dimension, measure and date filters applied, with quick filters shown on the dashboard to explore data by category, date and region. [Insert screenshot of filters]
4.	Calculation fields Used	Example calculated fields: Total Value = SUM([Value]) Average Value = AVG([Value]) Record Count = COUNT([Record ID]) [Insert screenshot of calculated fields]
5.	Dashboard design	No of Visualizations / Graphs - [ ] [Insert screenshot of dashboard]
6.	Story Design	No of Visualizations / Graphs - [ ] [Insert screenshot of story]

User Acceptance Testing (UAT) Template

Date	29 September 2026

Project Name	Import Data using Transform Map
Maximum Marks	

Project Overview:

Project Name: Import Data using Transform Map

Project Description: Importing data from a source file into the target table using a transform map to map source fields to target fields. Records are created when the data matches correctly; otherwise an error is shown.

Project Version: 1.0

Testing Period: [Start Date] to [End Date]

Testing Scope:

- Importing data from a source file using the transform map
- Field mapping between source and target fields
- Error handling for mismatched or invalid data
- Viewing imported records in Reports

Testing Environment:

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Import a data file with correctly matching data	1. Open the import option 2. Upload the source file 3. Run the transform map	Records are created successfully in the target table	[Record the actual outcome]	[Pass/Fail]
TC-002	Import a file where data does not match the fields	. Open the import option . Upload a file with ismatched data . Run the transform map	Records are not created and an error is shown	[Record the actual outcome]	[Pass/Fail]
TC-003	Verify field mapping in the transform map	1. Open the transform map 2. Check source-to-target field mapping 3. Run a test import	Source fields map correctly to the target fields	[Record the actual outcome]	[Pass/Fail]

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-004	Import duplicate records	. Upload a file containing uplicate rows . Run the transform map . Check the target table	Duplicates are handled or flagged as per the mapping rules	[Record the actual outcome]	[Pass/Fail]
TC-005	Import an empty file	1. Upload an empty file 2. Run the transform map	No records are created and a proper message is shown	[Record the actual outcome]	[Pass/Fail]
TC-006	View imported data in reports	. Open Reports . Select the target object . Check the imported records	Imported records are displayed correctly in the report	[Record the actual outcome]	[Pass/Fail]

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	[Describe the issue or bug encountered]	[Step 1] [Step 2] [Step 3]	[Low/Medium/High]	[Open/In Progress/Closed]	[Any additional comments]

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
