Project Executable Files

Date	29 September 2026
Team ID	SWTID-2026-2169
Project Name	Import Data using Transform Map
Maximum Marks	4 Marks
College	Balagan Saraswathi Arts and Science College For Women (MSU144)
Team Leader	Muthu Rani P
Team Members	Uthaya Lakshmi S, Mariya cinterlla A.

Project Executable Files

This section lists all executable and deployable items for the project "Import Data using Transform Map". The solution is built on ServiceNow, so it is deployed as configuration on a ServiceNow instance rather than as separate source code.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)	Remarks
1	Complete source code (all files and folders)	NA	Low-code project. Built with ServiceNow Import Sets (Data Source and Transform Map: "Laptop Inventory Transform Map"); no separate code files.
2	README / Setup Guide (instructions to run the project)	Yes	Step 4 of this document and the project report (Import_Data_Using_Transform_Map.pdf).
3	requirements.txt / package.json / dependency file	NA	No external dependencies; runs on a ServiceNow instance.
4	Database schema / seed files (if applicable)	NA	Uses ServiceNow Import Set table (u_laptop_import_set), Transform Map (sys_transform_map) and target table Laptop Inventory (u_laptop_inventory).
5	Environment configuration file (.env.example or similar)	NA	No environment file needed.
6	Deployed application URL (if hosted)	Yes	ServiceNow Developer instance (see Step 3).
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA	Web-based (ServiceNow) solution.
8	Dockerfile / Containerization config (if applicable)	NA	Not containerised.

S.No	Item to Submit	Submitted (Yes / No / NA)	Remarks
9	Test files and test results	Yes	Test screenshots in project report: loaded Import Set rows, Transform History,
10	Demo video or walkthrough (if required)	[Yes / No]	[Update after uploading; add link in Step 3]

Step 2: File / Folder Structure

Overview of the project's components and files:

```
/import-data-transform-map
|-- ServiceNow Instance (dev429096.service-now.com)
|   |-- System Import Sets > Load Data > Data Source: "Laptop Inventory Data" (Excel)
|   |   |-- Import Set Table : u_laptop_import_set
|   |   `-- Transform Map : "Laptop Inventory Transform Map"
|   |              (Source = Import Set table, Target = Laptop Inventory,
|   |               Field maps = Serial number, Model, Assigned to, Location)
|   |-- System Import Sets > Transform History (Status: Complete)
|   `-- Laptop Inventory [u_laptop_inventory] (Target table)
|-- /docs
|   |-- Import_Data_Using_Transform_Map.pdf - Project report with screenshots
|   `-- Project_Executable_Files.pdf      - This submission document
`-- /test-records
    |-- Laptop_Inventory.xlsx - Source data file (Excel)
    |-- Import Set records    - Rows loaded in u_laptop_import_set
    `-- Laptop Inventory records - Rows created by the transform
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://dev429096.service-now.com
Login Credentials (Demo)	Username: [enter demo username] Password: [enter demo password]
Platform / Hosting Provider	ServiceNow (Personal Developer Instance)
Repository Link	[paste GitHub / Drive link here]
Demo Video Link	[paste demo video link here]

Step 4: Run Instructions

Step-by-step instructions for the evaluator to run the project:

Pre-requisites:

A ServiceNow instance (Personal Developer Instance) with admin access, and a modern web browser (Chrome / Edge). Internet connection required. The Excel file (Laptop_Inventory.xlsx) with column headings and the target table Laptop Inventory must be available.

Step 1: Open ServiceNow and log in with the demo credentials. Click All, search for System Import Sets and open Load Data.

Step 2: Click Create table. Import set table label: "Laptop Import Set"; Source of data: File; File format: Excel (.xlsx); choose Laptop_Inventory.xlsx.

Step 3: Set Sheet number = 1 and Header row = 1, then click Submit. The rows are loaded into the Import Set table; click Loaded Data to check them.

Step 4: Click Create Transform Map. Name: "Laptop Inventory Transform Map"; Source table: Laptop Import Set; Target table: Laptop Inventory. Click Save.

Step 5: In the Field Maps related list, click Auto Map Matching Fields, then map any remaining fields manually (Serial number, Model, Assigned to, Location). Click Save.

Step 6: Return to the Import Set, click Run Transform, select "Laptop Inventory Transform Map" and click Transform.

Step 7: Wait for the transform to finish. Open System Import Sets > Transform History and confirm the status is Complete.

Step 8: Open the Laptop Inventory table (All > Laptop Inventory) and confirm the imported records are present.

Step 9: Open the Import Set Rows related list and check that each row shows the state Inserted.

Step 10: Open one Laptop Inventory record and verify that Serial number, Model, Assigned to and Location match the source Excel row.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Import works only for the configured Excel file format and column headings (Laptop Inventory Data source).	Create a new Data Source and Transform Map for other files when needed (future enhancement).
2	Import is run manually; no scheduled import or automatic notification on import errors.	Not implemented; Scheduled Import is planned as a future enhancement.
3	Requires ServiceNow and Transform Map knowledge; field maps must be updated if the file columns change.	Maintain field-map documentation; update the map and re-run the transform after changes.
